IMPORTANT: This is a supplementary list ONLY and does not supersede our regular catalog. If you have not received your copy of our standard catalog listing some 400 varieties, a copy of same will be mailed to you on request.

PRICES: Prices shown in this supplementary list INCLUDE PACKING CHARGES but are f. o. b. OUR PREMISES. All shipments will be made by express—charges collect. If shipment is desired by Parcel Post add 10% to the prices shown—15% for points west of the Mississippi.

TERMS: Cash with order.
To encourage the proper grouping of these small plants in your rock garden we are prepared to allow a discount of 10% from the list prices shown when THREE OF ONE KIND of plant are ordered. As a further incentive to group these plants for best effect we offer 15% discount for 5 plants of one kind.

We do not allow this discount for 5 assorted kinds of plants.

Apart from the real object of this discount as stated, we have just as much work in digging, planting, caring, growing, selecting, packing and shipping one plant as with 3 or 5 plants. Hence those clients who order on the quantity basis are entitled to this saving in all work involved.

VISITORS: We cordially invite our clients to visit our DISPLAY ROCK GARDEN located on our premises. It is open daily, Sundays and Holidays from 9 a. m. to 5 p. m. In this display rock garden is grown practically every variety in this supplementary list as well as those enumerated in our regular catalog.

Varieties with (*) and in italics are delightfully choice.

ACHILLEA: Gritty well-drained soil in sun.
* AGERATIFOLIA: (syn Anthemis Aizoon). A perfect gem of a plant with silvery foliage and white flowers; 10". .................................................. 50c
Umbellata: Another splendid type with distinctive silvery foliage and white flowers; 6". Dainty. .................................................. 40c

ALYSSUM: Gritty well-drained soil in sun.
Argenteum: Large flat corymbs of lovely yellow flowers, easy and a good sort; 10" 30c
Montanum: A dwarfer type than the above; 6", with splendid gray leaves and yellow flowers. Dainty. .................................................. 35c
Moellendorfianum: A showy, long-blooming kind with a shower of pretty yellow blossoms; 10". Trim after blooming as otherwise it becomes "leggy." Rare. .................................................. 50c

ANCHUSA: Semi-shade in rather moist but well-drained soil.
* MYOSOTIDIFLORA: An uncommonly beautiful gentian blue alkanet, with a pyramid of bloom in early spring; 20". .................................................. 50c

ANDROSACE: A well-drained gritty soil in sun.
* SARMENTOSA CHUMBYI: By all odds the choicest and easiest to grow, forming tight little wads of foliage with rosy pink flowers in spring; 6". Stock limited. .................................................. 75c

ANEMONE: Semi-shade in soil containing plenty of leaf mold.
Globosa: An early blooming kind with reddish purple flowers; a fine sort which is not common; 18". .................................................. 35c
* HUPHENSIS: The crowning glory of the autumn garden. Beautiful “rose du Barry” flowers poised on long stems. This will charm you when flowers are few; 18". .................................................. 50c
Pulsatilla alba: The white form of the “pasque flower”; chaste and refined. A really choice plant; 12". .................................................. 35c
Pulsatilla rubra: A mahogany counterpart of the above. Fine. .................................................. 35c

ANTENNARIA: Dry soil in sun.
Dioica: A 3" silvery leaved prostrate carpeter with white flowers. Splendid for contrast. .................................................. 30c
Candida: Another little spreader very much like the preceding variety. Foliage almost white. .............................. 30c

ANTHEMIS: Dry sunny soils in sun.
Aizoon: (see Achillea ageratifolia).
* MACEDONICA: A ferny leaved dwarf species with white flowers. .................. 40c

ARMERIA: Light soil, sun.
Laucheana: A beautiful deep reddish pink form of maritima, splendid for edgings. Profuse bloomer; 8". .................. 30c

ARABIS: Light soil in sun.
* KELLERERII: A tiny mite with gray leaves in rosettes; 3" white flowers. Should be in every rock garden. Choice. .................. 50c
Mollis: Another good sort of very tidy habit and white flowers; a real choice kind; 4". Delightful, rare. Stock limited. .................. 50c

ARENARIA: Semi-shade in cool soil.
Juniperina: Dwarf, tufty mite with grayish foliage and white flowers in profusion; 4". .................. 40c

ARTEMISIA: Light, well-drained soil in sun.
* CANADENSIS: "Silver Mist" is a well earned sobriquet as this really describes this fine sort. Trim it for best effect. Stock limited. .................. 60c

ARRHENATHERUM: Dry, loamy soil; sun.
Blubosum Variegatum: A dwarf little 4" variegated grass for odd corners. Greatly admired. .................. 35c

ASTER: Rich leaf mold soil in sun.
Mauve Cushion: Will prove a welcome addition to your collection of asters. Forms compact cushions with myriads of good sized mauve flowers; 6". .................. 40c
Himalaicus: Small of growth with lovely purplish blue blooms a fine species worthy of a place; 8". .................. 35c
Subcoeruleus: Another fine kind with large lavender blossoms somewhat taller than either of above; 12". .................. 35c

AURICULA: (See Primula Auricula).
BELLIS: A soil rich in humus and in light shade.
Rotundifolia: A chaste little mite with whitish pink flowers and gray tufty foliage. .................. 30c

* BRUCKENTHALIA: SPICULIFOLIA: One of the very choicest of pygmy shrubs of the heather family. Like a small cypress, evergreen, and of low compact growth; 8"—10". In July it hoists little pom-poms of light lavender pink aloft for admiration. For a peaty soil in semi-shade. Pot grown specimens only. .................. $1.00

CAMPANULA: Light, gritty soil in sun.
* LAURII: A new queen of rock garden campanulas with large lavender flowers; 6". Splendid habit and a fine addition to the rock garden. Limited stock. .................. 75c
Pusilla: A little mite of 4" and spreading growth with pale blue flowers. A dainty midget. .................. 50c
Pusilla alba: A white counterpart of the above, chaste and exquisite. .................. 50c

CORYDALIS: Leaf moldy soil in sun or light shade.
Bulbosa: A dainty mite of 6" with fern-like foliage and pinkish lilac blossoms. A real gem. .................. 50c

Our service department draws up plans for building rock gardens. For this service we charge a reasonable fee which is credited in full on orders received to the value of $15.00 and over.
